

PROFILE SUMMARY

Results-driven Backend Developer with 1.5 years of experience in building scalable web applications and RESTful APIs using Node.js and Express.js. Proficient in database design and management with PostgreSQL and MongoDB. Experienced in implementing real-time features using Socket.io and integrating frontend components using React.js. Adept at designing clean, maintainable code and collaborating with cross-functional teams to deliver robust backend solutions. Eager to contribute technical expertise and problem-solving skills to a growth-focused development team.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, SQL, HTML, CSS
- Backend Frameworks: Node.js, Express.js, NestJS
- Frontend Frameworks: React.js
- Real-time: Socket.io
- Databases: PostgreSQL, MongoDB
- Architectures: MVC Architecture, RESTful API Design, Real-time Applications
- API & Dev Tools: Git, Docker, Postman, Swagger, VS Code
- Operating Systems: Linux, Windows
- Methodologies: Agile, Scrum
- Other Skills: API Integration, Authentication (JWT, OAuth), Debugging & Performance Optimization

EXPERIENCE

Software Developer

UDYATA INFORMATION SYSTEMS PVT LTD AUG

2024- Present

- Built and maintained scalable RESTful APIs using Node.js and Express.js, powering core web application features and improving system integration efficiency by 30%.
- Developed and deployed real-time functionalities using Socket.io, enhancing user engagement and reducing data synchronization latency by 40%.
- Managed 100% of backend development tasks, collaborating closely with frontend and QA teams to ensure seamless functionality, stability, and production readiness.
- Optimized PostgreSQL and MongoDB queries, improving database performance and reducing API response times by 25%.
- Delivered 100% of assigned projects on time, contributing across all phases of the Software Development Life Cycle (SDLC) including planning, development, testing, and deployment.
- Implemented essential React.js frontend components to support full-stack features and ensure smooth UI-backend integration.
- Actively participated in Agile Scrum ceremonies, sprint planning, and retrospectives, contributing to efficient delivery and continuous improvement.
- Collaborated with cross-functional teams and clients to gather requirements, resolve technical challenges, and align solutions with business objectives.

EDUCATION

B.TECH IN COMPUTER SCIENCE AND ENGINEERING – KTU (2019–2023)

B.Tech in Computer Science and Engineering – Universal Engineering College

PROJECTS

TUKTUKO - Ride Sharing App

- Role: Full-stack Developer (Backend-focused)
- Designed and developed a ride-hailing platform with real-time capabilities, enabling seamless interactions between drivers and riders via dedicated web and mobile apps. Implemented secure authentication using OAuth and JWT, and real-time trip tracking and messaging using Socket.io.
- Developed RESTful APIs for trip creation, driver-rider matching, and ride history management. Built an admin panel for driver verification, trip monitoring, and system management. Integrated OpenStreetMap (OSM) with Nominatim for geolocation and routing features.
- Utilized MVC architecture for maintainable code structure and integrated Redis for efficient caching and improved performance. Contributed to frontend integration with React, HTML, and CSS.
- Technologies: Node.js, Express.js, PostgreSQL, MongoDB, Redis, Socket.io, OAuth, JWT, React.js, HTML, CSS, OSM (Nominatim)
- Features: Driver & Rider Apps, Real-time Trip Tracking, Live Messaging, Admin Panel, Authentication & Authorization, Redis Caching

Table Management & Reservation System (SaaS)

- Role: Backend Developer
- Developed a multi-tenant SaaS-based restaurant table management platform using NestJS and TypeScript, supporting hierarchical access (Organisation → Property → Outlet) with strict tenant-level data isolation.
- Designed and implemented real-time table availability, slot-based and multi-table reservations, and guest management with history and spending insights. Built canvas-based interactive floor plan and layout management to visually align tables, zones, and preferred seating areas, enabling efficient outlet configuration.
- Secured all APIs using JWT authentication and role-based access control (RBAC), and delivered outlet-level dashboards for reservations, table occupancy, and operational insights
- Technologies: NestJS, TypeScript, Node.js, PostgreSQL, TypeORM/Sequelize, JWT, RBAC

Vawe -Donation

- Role: Backend Developer
- Developed backend APIs for a donation management platform enabling project listing, secure donations, and PDF receipt downloads.
- Implemented JWT authentication and RBAC, securing donor, admin, and approval workflows.
- Built admin modules to approve donors, manage donor profiles, and track transaction details.
- Implemented donor membership subscriptions for recurring contributions.
- Integrated PDFKit for automated donation receipt generation.
- Technologies: Node.js, Express.js, PostgreSQL, JWT, RBAC, PDFKit, RESTful APIs

Delivery System Integration with Symphony – GSS

- Role: Backend Developer
- Designed and developed backend APIs to integrate a custom delivery management system with Oracle Symphony POS for seamless order handling and logistics operations. Implemented endpoints for customer creation, order placement, driver registration, driver assignment, delivery status updates. Ensured secure and efficient communication between the delivery platform and Symphony POS using robust API structures and data validation. Supported real-time order flow visibility for admins and optimized driver workflows to improve delivery accuracy and speed.
- Key features include order-to-driver auto-matching, status-based delivery tracking, and event-driven notifications for delivery lifecycle updates.
- Technologies: Node.js, Express.js, PostgreSQL, RESTful APIs

Elite Envoy

- Role: Backend Developer
- Built dynamic form creation and workflow management for a global recruitment platform tailored to country-specific hiring processes. Enabled customizable multi-step flows including interview scheduling, document verification, and candidate evaluation.
- Implemented role-based access control, backend APIs, and data management for seamless process handling.
- Technologies: Node.js, Express.js, PostgreSQL, JWT,

Jewelry Catalog & Order Management System

- Role: Backend Developer
- Developed a jewelry catalog and order management system enabling admins to create and manage product categories, subcategories, and product listings, along with order placement and tracking. Built RESTful APIs for product management, order workflows, and listing operations with secure role-based access. Ensured clean, scalable backend architecture and seamless integration with frontend applications.
- Technologies: Node.js, NestJS / Express.js, TypeScript, PostgreSQL, Sequelize / TypeORM, REST APIs, JWT

ACHIEVEMENTS AND CERTIFICATES

- Full Stack Developer Program – Luminar Technolab, Kochi | May 2023
- Full Stack Development Certification – NACTET | 2023
